[Go PR Prowler](#)

What does it do for you?

PR Prowler will help you to improve and maintain page ranking and link popularity.

Where the other free tools simply report on who has the highest PR score, this powerful tool will also tell you how many outbound links a site has (too many of these and a site linking to you with a high PR will make very little difference to you own).

In addition to this you'll be able to see how many backward links any site you choose has.

One of the areas where PR Prowler excels is it will predict what your own PR score would be if the site in question linked to you.

How you profit

Take it from me, when you're looking for a way to see who should be linking to you and who shouldn't this is what you need. It's a little known fact that a bad link to you from another site can actually damage your positioning within Google, why take the risk?
